INFASTRUCTURE  
COSTS**

**CONSISTENT USER  
EXPERIENCE**

**MORE BUDGET  
FOR FIXTURES**

**HIGHER RETURN  
ON INVESTMENT**

**LESS DOWN TIME**

## GET MORE LIFE FROM YOUR EXISTING INFASTRUCTURE

### ADD MODERN CAPABILITIES IN LESS TIME

Do you have an existing entertainment lighting system ready for an update? The Vari-Lite System Upgrade Program can help you identify and replace key components in your CD80SV, C21, EC21, R21, or S21 power control system as part of a full system update. By focusing on only the parts of the infrastructure that need updating, you can limit the scope of work for less downtime and address outstanding maintenance issues in a scheduled way. That way, you can implement a broader upgrade that includes cutting-edge luminaires, controls and networking products.

With the Vari-Lite System Upgrade Program, you can reduce the cost of important, but necessary behind-the-scenes infrastructure upgrades and spend more of your budget on higher-impact wish list items, such as new color-changing LED luminaires, lighting consoles, and data distribution products, all of which improve overall system functionality. This provides a better return on investment and a bigger impact from the same budget.

## HOW IT WORKS

### EVALUATION

A business partner will evaluate your entire system, including the processor, backplane, terminations, fans, and modules of your power distribution equipment, along with user interfaces, including control stations and the console.

They will make a recommendation on how to upgrade your system, including retrofit modules to upgrade your power system, control and data distribution to improve your infrastructure, and new industry-leading luminaires.

### SYSTEM UPDATE

An integrator will upgrade your existing power components using modern processors with faster speeds, network connectivity, and redundancy options, and upgrade dimmer modules with relay modules for use with DMX-controlled LED luminaires where needed.

The new system can also upgrade consoles and other control components for improved looks and better functionality, as well as modern fixtures for better, more efficient lighting.

### SYSTEM CLEANING

While upgrading your system, the integrator will also perform a complete cleaning, including replacing air filters, as well as removing dust from modules and other components. This will improve performance and longevity of the system.
